

Noveltiespresentation RhB Ge4/4II 616 - Rhätia

Dear friends of Swiss narrow gauge railways,
with the fourth advertising locomotive this year, the Ge4/4II novelties of the current and last year have been realised. Look forward to this special highlight in your collection.
And now enjoy reading our newsletter.

Nm-222.2: RhB Ge4/4" 616 Filisur, Spendenlok „Rhätia“, Neusilber-Handarbeitsmodell, Faulhaber motor

RhB Ge4/4II 616 Rhätia Nm-222.2

Art.-Nr./item-no./produit-no.

Ge4/4II 616, red/white with dark grey apron
herald and municipality name of Filisur
donation locomotive "Rhätia"
Nickelsilver handmade model, scale 1:160, gauge Nm
Faulhaber motor with flywheel
Zimo MX616 decoder, optimised for analogue layouts

For the first time, the Rhaetian Railway is advertising another locomotive on a locomotive. This is not just any locomotive, but THE locomotive, namely the first steam locomotive of the company, which was formerly called Landquart-Davos-Bahn at the time, and its locomotive #1 with the melodious name "Rhaetia". The redecoration is accompanied by an appeal for donations for the preservation and re-commissioning of this historic vehicle.

To save the oldest steam locomotive of the RhB, Ge4/4II 616 was presented in advertising dress on 09.11.2018.

The advertising motif shows the supporting associations, the "coal" requirement, a type sketch by Wolfgang Finke, as well as the donation barometer, which has risen continuously over the course of the last two years.

We also support the restoration of the Rhätia with the sale of the model.

Limitation

The locomotives of the Ge4/4II series are exclusively offered by us in a strictly limited edition. An enclosed certificate informs you about the serial number of your model.
The Ge4/4II 616 with Filisur coat of arms, without advertising inscriptions, is still in production and can still be ordered (item no. Nm-222.1).

Early-Order-Prices

We are pleased to be able to offer you an attractive pre-order price for this model as well, significantly below the regular price. The pre-order period has already expired.
All orders received by 30.09.2020 are in production and will be delivered within a few days. We will inform you via email as soon as your model is finished, test-driven and ready for shipment.

We will try to deliver all pre-orders at the reduced VAT rate before the end of the year.

We are still accepting new orders. Please allow approximately 12 months for delivery.

A donation of 50 Swiss francs is associated with the sale of the model. This donation is at our expense and does not increase the selling price of the model!

Our model represents the prototype as close to scale as possible in 1:160:

The locomotive body was painted in white, red and dark grey, then decorated with several decals to imitate the prototype. The additional front sockets of the multiple controls are mounted and their handles are black.

The rounded corner windows are also finely executed, made of bent and individually back-glued foil. The often seen magnifying glass effect is thus absent.

Handlebars are of course free-standing and the cover grille for the brake resistors is open-worked.

The roof is decorated with fine model pantographs, which have no electrical function and must not be connected to any overhead wire.

The model is strictly limited, comes in a sturdy box, with detailed instructions and certificate.

The locomotive is driven by a Faulhaber motor with a large flywheel mass, which is mounted in a milled brass chassis. To optimise the driving characteristics, a Zimo MX616 decoder is fitted as standard, which is set at the factory so that it is ideally suited to analogue operated layouts.

Coupling is done with the MicroTrains coupling for N-narrow gauge.

The model can only run on metre-gauge tracks with 6.5mm track width. A conversion to 9mm is not possible.

A corresponding 1:150 model has been announced by MDS and can be pre-ordered.
