Scale for Freight Wagons

Dear friends of Swiss railways,
we are pleased to present you a new highlight in our accessories programme: a typical scale for freight wagons as you can find it on standard and narrow gauge tracks.
We hope you enjoy reading today's newsletter.

Scales

Especially in earlier years, when railway vehicles were still loaded locally on the loading track, scales for freight wagons were an indispensable part of a station. They existed and still exist in some cases today - on both standard and narrow-gauge railways.

Scale for Freight Wagons

Zub-345.1

Art.-Nr./Item-no./produit-no.

scale for freight wagons, type Filisur, 3D-printed painted and lightly weathered, ready for installation with track inlay for the tracks N and Nm manufacturer is the company Klett Modellbau

Model

With great anticipation we received a package from Klett Modellbau a few days ago and found the beautiful railway scales inside.

The 3D printed model is sensationally detailed, finely painted and lightly weathered. The kit is ready to install and can be used straight from the blister.

The track block signal is solidly mounted on a fine steel wire.

Installation

The railway scale can be installed on the layout directly from the package. If there is space under the track, a hole is drilled and the peg under the scale is glued in, otherwise the peg under the weighing apparatus is carefully removed with a cutting disc and the model is glued on smoothly. The weighing plate, which is glued into the track, is included in two versions, for N and Nm tracks, so that it can be weighed either on standard or narrow gauge track. The gleam in our eyes was so great that we immediately took out our Filisur station and exchanged the handmade scale for freight wagons for the new one. You can see the result in the product picture above (on the right side). We are sure that you will have just as much fun with this outstanding accessory. This accessory is very fine detailed. Please handle with care while installing on your layout.

Function

For weighing, the freight wagons were moved onto the plate, lifted by the crank visible on the side until they stood on the wheel flanges. The weight was determined in the box to be opened by adjusting the counterweight (see photo on the left).

The track inlay comes with the scale in two versions. On the one hand suitable for the metre gauge railway, on the other hand for the standard gauge with 1,435mm track width, i.e. for 6.5mm and 9mm tracks.

The model is without function!
